

Holding the rate

The RBI has rightly opined that premature action risks 'disruptive policy reversals later'

The Reserve Bank of India's decision to keep the policy interest rate unchanged, and reaffirm its "neutral" policy stance, clearly indicates that policymakers at the central bank are singularly focussed on their primary remit of ensuring price stability while supporting economic growth. That the RBI's Monetary Policy Committee has chosen to do so in the face of clamour for a rate cut, and Consumer Price Index data and the bank's own survey of households' inflation expectations appearing benign, points to the MPC's determination to reassert the central bank's independence, especially in the rate-setting realm. Laying out its reasoning for opting to remain "watchful", the RBI has raised pertinent questions relating to the outlook for price stability, the foremost being whether the "unusually low momentum in the reading for April will endure". It posits that the easing trend in inflation, excluding food and fuel, may be transient given its vulnerability to rising rural wage growth and strong consumption demand. And the elephant in the room, in the MPC's opinion, is the real prospect of inflationary spillovers from the rising risk of fiscal slippages caused by farm loan waivers – Uttar Pradesh has set the stage, and Maharashtra's government has vowed to come up with the State's largest-ever. Observing that inflation has fallen below 4% only since November 2016, the RBI has reiterated its commitment to keeping the headline reading close to that figure on a "durable basis".

The MPC acknowledges that the latest monsoon forecast augurs well for the agriculture sector, and when viewed in conjunction with continuing robust government spending, it ought to help undergird overall momentum in the economy. The RBI's business expectations index based on its industrial outlook survey of April points to upbeat prospects for the manufacturing sector in the second quarter of the current fiscal year, spurred by rising rural and overseas demand. However, on the growth front too the RBI's policy panel has opted for caution given that the Central Statistics Office's GDP and GVA (gross value added) data released last month suggest that the effects of demonetisation have lingered on. The RBI has accordingly cut its GVA growth forecast for the year ending in March 2018 by 10 basis points to 7.3% and flagged the risks that global political uncertainties, rising input costs and wage pressures and the twin balance sheet problem (an over-leveraged corporate sector and stressed lenders) pose to a revival in private investment demand and a more durable economic expansion. Spelling out the priorities, the MPC has said monetary policy can be effective only when private investment has revived, the banking sector's health is restored and infrastructure bottlenecks are removed. To do otherwise "risks disruptive policy reversals later and the loss of credibility" of the RBI.

The PM-in-waiting

Ireland's new leader Leo Varadkar will have to oversee issues of Brexit and social reform

Leo Varadkar, the son of an Indian immigrant, is set to be Ireland's Prime Minister after he won an internal contest to lead the centre-right Fine Gael, the senior coalition partner in the Republic's minority government. The outspoken Mr. Varadkar, the incumbent Social Protection Minister, is to take over the reins of the party and country from Enda Kenny, who is stepping down after heading the party for 15 years and the country for six. Mr. Varadkar will be Ireland's first-ever openly gay Prime Minister with minority and immigrant roots. He is just 38 years old, and thus in a club of young world leaders with France's Emmanuel Macron and Canada's Justin Trudeau. While it is indeed remarkable that a person of Mr. Varadkar's background has been elected to lead Ireland, what is even more striking is that during the ruling party's elections voters focussed not on his background but on his policies. This speaks volumes for how far the country has come on its social attitudes. Ireland is deeply religious. Catholicism, the state religion, has a far-reaching influence on many aspects of Irish life, including birth, death and marriage. Abortions, except to save the mother's life, are illegal; divorce, legalised in the 1990s, requires a four-year separation; and gay marriage was legalised just recently.

As Prime Minister, Mr. Kenny steered Ireland out of the financial collapse of 2008-2010 and campaigned, successfully, for the European Union (EU) to recognise Ireland's unique position during the forthcoming Brexit negotiations between Brussels and London. The Republic of Ireland is contiguous with Northern Ireland, and therefore the only EU country that shares a land border with the U.K. Mr. Kenny leaves office having convinced the EU to address the fallout for Ireland during Brexit negotiations. He also leaves Mr. Varadkar a vastly improved economy, with an unemployment rate close to 7%, about half of what it was in 2012. Mr. Varadkar will now have to build on his predecessor's success and address his failures, including a severe housing shortage and a police service that has demonstrated an ability to collude with other public agencies to punish whistle-blowers and cover up corruption. As regards Brexit, Mr. Varadkar will have to ensure that the Common Travel Area, a mechanism by which British and Irish citizens can live and work in the two countries, is maintained, and that the border between the Republic of Ireland and Northern Ireland is not reinstated. He will also have to manage the economic impact of Brexit on trade and jobs in the event that the negotiations diminish Britain's access to the European single market. Finally, as Prime Minister, he will be expected to shepherd further reforms in laws relating to divorce and abortion if he wishes to further align the Republic's values with those of the EU and other liberal democracies.

Retrieving ground in Afghanistan

The legitimacy of its institutions, including the unity government and the security forces, must be enhanced

RAKESH SOOD

Last week provided a grim reminder of the worsening security situation in Afghanistan. A suicide attack on May 31 in the heart of Kabul, with a truck bomb containing 1,500 kg of explosives, has left more than 150 persons dead and hundreds injured. No one has claimed responsibility and the Taliban issued a statement denying any involvement. Afghan intelligence have blamed the Haqqani network working together with the Pakistani Inter-Services Intelligence, a charge vehemently rejected by the Pakistani government.

Two days later when over a thousand people collected near the site, the mood of the demonstrators was anti-government. Banners and slogans were raised calling on the government to resign. As the demonstrators moved towards the presidential palace, police used water cannons and tear gas to break up the crowd. According to the police, some protesters were armed and began shooting, forcing the police to retaliate. Half a dozen protesters were killed. Among them was Salim Izadyar, son of Mohammed Alam Izadyar, a prominent Tajik and the Deputy Speaker of the Meshrano Jirga (Upper House).

Fault lines exposed

The following day, on June 3, at Izadyar's funeral, three suicide attackers blew themselves up killing more than 20 and injuring over a hundred mourners. Among those present were Chief Executive Abdullah Abdullah, Foreign Minister Salahuddin Rabbani and former intelligence chief Amrullah Saleh, who escaped any injuries. A fourth attacker was nabbed and has admitted to having been recruited and trained by the Taliban in Quetta.

Coming in quick succession, these events have exposed the weaknesses of the National Unity Government (NUG), emboldening the opposition. Dr. Abdullah has appealed for calm and said that if it helps, he is ready to step down. It is clear that his support base has eroded. Meanwhile, Foreign Minister Rabbani hinted at conspiracies. Protesters have pitched a tent outside the hospital in the area, which has become a focal point for speeches by Tajik leaders, including former Vice-President Ahmad Zia Massoud, who hold the Pashtun-dominated government of President Ashraf Ghani responsible. The Tajik-led Jamiat is now reaching out to other ethnic groups, Uzbeks and the Hazaras. Meanwhile, Uzbek leader and Vice President Abdul Rashid Dostum left for Turkey last month for "medical treatment" following growing public criticism after his security guards sexually assaulted a political rival.

The NUG agreement, concluded in September 2014, with strong backing of the U.S., was more than just a means of resolving the electoral dispute between the two candidates, Ashraf Ghani and Abdullah Abdullah. It was a power-sharing arrangement between the Pashtuns who have traditionally ruled Afghanistan and the non-Pashtuns (Tajiks, Uzbeks and Hazaras). The creation of the post of the Chief Executive, to be converted into the position of a Prime Minister within two years, was an attempt at moving away from the highly centralised presidential system introduced in 2003 towards a more federal arrangement. In 2003 too, the Northern Alliance had demanded the position of a PM but had to be content with the compromise of a President and two Vice-Presidents on the tacit understanding that the two Vice-Presidents would come from the smaller ethnic groups. The U.S. had strongly backed the idea of a strong American-style presidency, overlooking the fact that the institutional checks and balances of the U.S. system were missing in the war-ravaged country.

The constitutional amendment for converting the position of the CEO into that of PM is still pending as parliamentary elections which were due in 2015 have not taken place; these elections were to be preceded by changes in the electoral procedures which were to be worked out by a special commission that would, in turn, be approved by a newly constituted Independent Election Commission. With this process having come to a halt and a change of administration in Washington, differences between President Ghani and Dr. Abdullah today can no longer be patched up. They keep erupting, reflecting a governance structure that is both under internal strain and external attack by the Taliban. The visible anti-government sentiment is a worrying sign.

Deteriorating security

There is talk about pushing through a parliamentary election

next year and advancing the presidential election by a year (it is due in 2019) to save costs. However, the deteriorating situation raises questions about the feasibility of elections. Today, less than 60% of Afghanistan's territory is under government control; the rest is either contested by or under the Taliban. While putting its weight behind the NUG in 2014, the Obama administration also backed the idea of 'a lasting political settlement between the Afghan government and the Taliban'. To this end, he announced that 8,400 U.S. troops would stay on in Afghanistan (together with another 5,000 from NATO partners) in an 'assist, advise and train' mission.

The Trump administration has yet to announce its policy though indications are it might authorise an increase of 3,000-5,000 in U.S. troop levels. This is the figure mentioned by General John Nicholson in his testimony to the U.S. Congress in February and has been supported by both Defence Secretary Jim Mattis and National Security Adviser H.R. McMaster. Gen. Nicholson described the current situation as a 'stalemate' which needed to be tilted in favour of the Afghan security forces. Like his predecessors, he too held Pakistan responsible for the Taliban's successes, pointing out that eliminating external sanctuary and support is essential to the success of the mission. Yet, other than calling for a 'holistic response', he failed to specify what this would entail.

Since the U.S. has been unable to change Pakistan's behaviour despite having provided nearly \$34 billion in economic and military assistance since 2002 accompanied by occasional threats to suspend or withhold the funds, enhancing capability of the Afghan security forces remains the only option. This means strengthening the Special Forces in both the Army and the Police as these are most effective in fighting the insurgency and providing air power and artillery. The U.S. provides \$3.4 billion out of the NATO's annual support of \$4 billion for the Afghan National Security Forces. In addition, it

spends nearly \$18 billion on maintaining its troop presence (it costs slightly more than \$2 million a year to deploy a U.S. soldier in Afghanistan). In comparison, raising and equipping a brigade of Special Forces would cost a billion dollars a year. Therefore Gen. Nicholson's idea of a slight increase in international troop presence can only work only if it is coupled with practical ways of enhancing Afghan capabilities.

Mirage of reconciliation

In recent years, numerous initiatives to bring the Taliban to the negotiating table have been attempted. A Taliban office in Doha was intended to get the Taliban negotiators away from the ISI's control but turned out to be a non-starter. The four-country quadrilateral group involving China along with Pakistan, the U.S. and Afghanistan came to an abrupt end when it was revealed that Mullah Omar was no longer alive and had died, possibly two years earlier. Russia is now promoting the idea of talks by playing up the idea of the larger threat of the Islamic State that has emerged in eastern Afghanistan in Nangarhar province though this has failed to carry much traction with the Afghan authorities. President Ghani is putting his faith in a new regional initiative, similar in composition to the Heart of Asia process. If the past is any guide, none of these will yield any concrete benefits because unless the ground situation is materially altered, any talk of reconciliation with the Taliban remains premature and ends up conveying mixed signals, to the Afghans, the Taliban and Pakistan.

If the gains of the last fifteen years are to be preserved, the only option is to enhance legitimacy of the Afghan institutions: the NUG, the election process and the Afghan National Security Forces.

The neutrino opportunity

Setbacks to the Neutrino Observatory show the need to garner public support for scientific research

JAIBY JOSEPH & M.P. RAM MOHAN

India's wait to join the elite club of countries undertaking neutrino research suffered a procedural delay in March this year when the National Green Tribunal (NGT) suspended the environmental clearance (EC) granted to the India-based Neutrino Observatory (INO), and ordered it to file a fresh application for clearance.

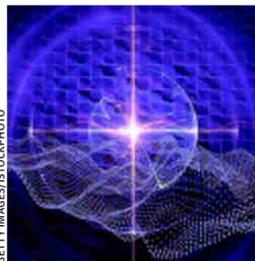

The proposed INO project primarily aims to study atmospheric neutrinos in a 1,300-m deep cavern in the Bodli West Hills in Theni district, Tamil Nadu. If completed, the INO would house the largest magnet in the world, four times more massive than the European Organization for Nuclear Research, CERN's Compact Muon Solenoid (CMS) detector's magnet. Neutrinos are tiny particles, almost massless, that travel at near light speeds. Born from violent astrophysical events such as exploding stars and gamma ray bursts, they are abundant in the universe, and can move as easily through matter as we move

through air. They are notoriously difficult to track down. If you hold your hand towards the sunlight for one second, about a billion neutrinos from the sun will pass through it; this is because they are the by-products of nuclear fusion in the sun. These little wisps hold the blueprint of nature, which the INO project aims to use to understand some of the unsolved mysteries of the universe.

While the suspension of INO's environmental clearance is a setback, the scientific community hopes these procedural lapses will be addressed in an earnest and time-bound manner. The NGT's March 2017 order further delays the start of the project. Now the earliest conceivable completion date is projected as 2022. The INO will fall further behind other facilities including China's Jiangmen Underground Neutrino Observatory (JUNO), expected to open in 2019.

What it involves

The INO project also has its critics. Many argue, among other things, that the explosives used in construction are a threat to the highly sensitive ecology of the Western Ghats, and that the relevant radiation safety studies for carrying out the long baseline neutrino experiment in the second phase of INO have not been done. The pro-

GETTY IMAGES/ISTOCKPHOTO

posed excavation is planned to be carried out by a controlled blast, limiting the impact of vibrations with the help of computer simulations. Additionally, building the INO involves constructing an underground lab accessed by a 2 km-long horizontal access tunnel, resembling a road tunnel. Such tunnels have been built extensively in India and the relevant studies show that the environmental impact (mainly dust and noise in the initial phase) have been managed. In the second phase, the INO project initially had planned to be set up as a far detector for the Neutrino Factory, which is a proposed particle accelerator. This may not be necessary because of the discoveries already being made in the field. Even if you build it, the radiation from the neutrino beam alone on an average would be one

in 100 millionth of the natural radiation, which is negligible.

The procedural lapses and assumptions about the project's agenda have made a project of this scale hard to bear fruit in India. Further, allegations such as neutrinos being radioactive particles and that the INO will double up the storage of nuclear waste have damaged the collaboration's many years of outreach efforts. Any further delays could defeat the purpose of the project because similar projects elsewhere could undermine India's efforts. For those who argue that ₹1,500 crore is a waste of money, it might be instructive to look back at the enormous achievements 20th century has brought in on the pillars of relativity and quantum mechanics.

Long history of research

Neutrino research has a long history in India. In the 1960s and 1970s, a group of scientists led by the Tata Institute of Fundamental Research detected some unusual experimental observations, the so-called Kolar events in the Kolar Gold Fields (KGF) in Karnataka. Half a century later, however, these events remain as science fiction, yet to be explained and unravelled. From the 1980s, neutrino enthusiasts discussed the possibility of a neutrino observatory located in In-

dia. In 2002, a document was presented to the Department of Atomic Energy which laid out an ambitious plan to establish the INO. Since then, fast-paced developments have taken place in neutrino physics. Consider this: more than half the Nobel Prizes in physics in the past 50 years have been awarded to basic research in particle physics; this includes the 2015 Prize for the discovery of neutrino oscillations. On January 5, 2015, the Union cabinet gave its approval to establish the INO at an estimated cost of ₹1,500 crore, the most expensive basic science project in India.

While public apprehensions in such projects are understandable, they also demonstrate that communication between the scientific community and the public needs to be more basic and democratic. For a country of young minds, we should generate sufficient public support for such high technology and science projects.

Ram Mohan, an Associate Professor at the Indian Institute of Management, Ahmedabad, works on nuclear risk regulation and governance. E-mail: mpramohan@iima.ac.in

LETTERS TO THE EDITOR

Letters emailed to letters@thehindu.co.in must carry the full postal address and the full name or the name with initials.

The farmer in distress

Agriculture is the backbone of the Indian economy but the sad part is that it is still in a rudimentary stage, which ultimately affects the overall economy. The most egregious and heartbreaking instance of the agricultural crisis is the ongoing strike by farmers in Maharashtra since June 1. Their basic demands, which range from a full waiver of farm loans, hikes in the minimum support price for agricultural produce to writing-off pending electricity bills, underscore their desolate condition. At the heart of the crisis is the unjustified fall in the prices of agricultural goods despite a bumper crop ascribed to a good monsoon this year, which has made farmers disillusioned. There have to be steps to reform the agricultural produce market committee system such as

ascribing each crop with genuine price signals, increasing crop insurance and introducing a model contract farming law. These will go a long way in freeing farmers from MSP-driven crop planning.

ANISHA, Rohtak, Haryana

■ In his 32-minute-long speech delivered extempore in the Central Hall of Parliament in May 2014, Narendra Modi said that his "government is one which thinks about the poor, listens to the poor and which exists for the poor.... This government is for the villagers, farmers, Dalits and the oppressed...." Now after reports of firing at and killing of farmers, is this what Mr. Modi meant when he said that "this government is for their aspirations"? Nothing can justify police firing on

agitating farmers and the government should have given utmost priority to redress their genuine grievances ("5 killed as police fire on M.P. farmers", June 7). The nation lives not because of its bureaucrats, politicians, rulers, engineers, doctors and the corporate world but because of our farmers. When they protest, this is not the way to counter them.

SUKUMARAN C.V., Palakkad, Kerala

Catching the rain

The IMD's prediction that the country is likely to receive more rains this monsoon than estimated is encouraging but the question is how far we are prepared to conserve all this rainwater ("IMD predicts more rain this monsoon", June 7). Storing rainwater during the monsoon season

is all the more important than saving it during summer and it is our collective responsibility to ensure that not a single drop is wasted. While governments should ensure desilting of tanks and other waterbodies periodically, households and individuals should practise water harvesting in their little ways which will vastly improve the water table.

KSHIRASAGARA BALAJI RAO, Hyderabad

A hasty rollout?

As July 1, the day of reckoning, is fast approaching, news that the GST interface is not fully geared to make the implementation process simple and easier is shocking (June 7). It is unbelievable that a country which is home to some of the best software professionals is lagging

behind in building a foolproof system for its own needs. Rolling out the GST without getting the basics right will spell disaster for the economy in general and the common man in particular. The common man has yet to understand fully the implications and the extent of the GST. The attitude of the government seems to be that of crossing the bridge when it gets to it. Instead of taking everyone by surprise, the endeavour of the government should be to make the GST discernible. A panel comprising economists, bureaucrats, lawmakers and representatives from the chambers of commerce must iron out all issues. Perhaps the GST can be deferred by a few months, say to January 1, and aligned with the new financial year.

SUBRAMANIAN VENKATRAMAN, Chennai

Tall leader

In the demise of Era Sezhayan, the nation has lost an affable, unassuming and knowledgeable parliamentarian who stood tall among political leaders and was loved by all irrespective of party affiliation ("Veteran parliamentarian Era Sezhayan breathes his last at 95", June 7). On more than one occasion he refused to accept positions of power. He was an authority on parliamentary procedures and Speakers often looked up to him for clarifications and advice from time to time in exigencies. Leaders like Sezhayan who maintained unquestionable probity in public life are difficult to come by in the present political scenario.

Declare instant triple talaq invalid

Social boycotts and no-triple-talaq conditions in prenuptial contracts will not bring gender justice

A. FAIZUR RAHMAN

Ever since the Attorney General told the Supreme Court that the government will bring in a comprehensive divorce law for Muslims if the court outlaws triple talaq, some commentators have been arguing that the wider and more liberal right of divorce of Muslim women should not be taken away for the sake of judicial oversight of divorces.

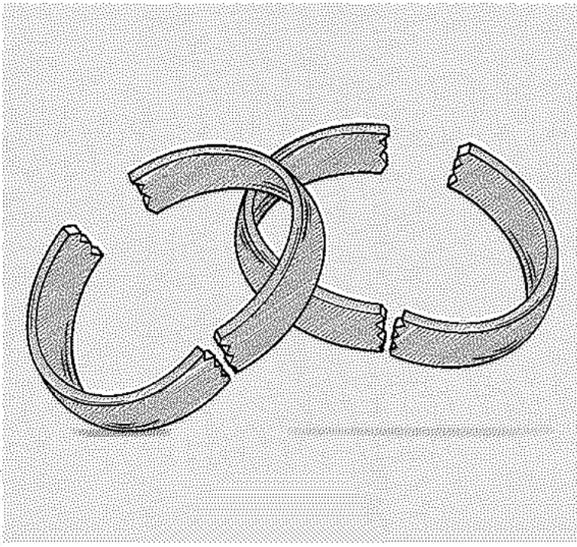

Some of the options

Before we go into the necessity for judicial oversight of divorces, the question that needs to be answered is: Do Muslim women really have equal right to divorce in India? Let's examine some of the options that are spoken of as liberal rights of Muslim women.

Faskh: This is not the equivalent of *talaq-e-bida'* (instant triple divorce) where women can unilaterally divorce their husbands in one go without judicial intervention. In *faskh*, the woman approaches the Qazi and it is he who annuls the marriage on her behalf provided he finds merit in her petition. Therefore, unless the husband's unadjudicated unilateral right to *talaq-e-bida'* is withdrawn, *faskh* cannot be counted as an equal or reasonable option for Muslim women to dissolve their marriage.

Talaq-e-tafweez: Under the prevailing Muslim law in India, a husband can either pronounce *talaq* himself or give this power to an agent. If the agent happens to be his wife, the delegated right is called *talaq-e-tafweez*. It is obvious here that insofar as the wife is concerned, this right is not her own. It flows from her husband. If he refuses to devolve it to her, she will not be able to divorce him. Moreover, even after granting *talaq-e-tafweez* the husband retains the right to *talaq-e-bida'* which hangs over the wife's head like the proverbial sword of Damocles.

In the Koran-based Islamic law the question of the husband delegating to his wife the power to divorce does not arise. She enjoys rights on a par with her husband under the dictum *wala hunna mistul lazi alai himna bil ma'arof* (Koran 2:228). In other words, asking women to secure their right to divorce through *tafweez*

GETTY IMAGES/STOCK

would amount to forcing them to concede the legal superiority of their husbands as males, and their own inferiority as females. *Talaq-e-tafweez* finds no mention in the Koran or any Prophetic *hadees*.

Khula and mubarah: Under the present Muslim law, divorce at the instance of the wife is called *khula*. It cannot be described as an unconditional or absolute right of the wife because it violates the legal parity given to Muslim women in the Koran by laying down the conditions that for the offer of *khula* to be valid, a) it must be accompanied by a consideration (usually monetary) known as *evaz*, and b) the offer must be accepted by the husband.

This interpretation is supported by the Compendium of Islamic Laws (CIL) published by the All India Muslim Personal Law Board (AIMPLB) in 2001. It states: "Termination of marital relation by the husband in consideration for a return agreed upon by the parties is *khula*, whether it is through the word *khula*, or by *mubara'at*, or by the word *talaq* or any other of its synonyms." (p.93)

It may be pointed out here that *mubarah* is the only form of divorce in which the wife enjoys legal equality with her husband. But the AIMPLB, by equating it with *khula* and *talaq*, has made even *mubarah* contingent on the husband's consent.

Lian: As per the Koranic definition (in 24:6-9) *lian* is not a form of di-

voice. It is a kind of mutual swearing that averts punishment for adultery. According to the Koran, a husband who does not have any witnesses, except himself, to prove his wife's adultery must swear by God four times that he is speaking the truth, and again for a fifth time invoking the curse of God on himself if his accusation is proved to be a lie. However, if the accused wife too goes through the same process of swearing to counter her husband, the punishment for adultery shall not be imposed on her.

The Koran does not elaborate on the effect of *lian* on the marriage. But the CIL states that after the mutual swearing, "the qazi will effect separation between the parties, and it will amount to an irrevocable divorce". (p. 88).

This clearly shows that *lian* is not a divorce at the instance of wife. Even if it is considered so, it is not unilateral or instant like *talaq-e-bida'* and is limited to cases involving accusations of adultery.

Khiyar al buloogh: This anachronistic doctrine is actually a tacit justification of child marriage and hence cannot be accepted as an option available to an adult Muslim woman to dissolve her marriage.

According to the Hanafi law treatise *Fataawa al-Hindiya*, the marriage contracted on behalf of a minor by any guardian other than the father and paternal grandfather can be revoked by the minor on attaining the

age of puberty through *khiyar al-buloogh* or, the Option of Puberty.

It is sad to see Muslim theologians trumpeting *khiyar-al-buloogh* as a progressive provision in Islamic shariah even while justifying the marriage of minors and declaring that a minor girl's marriage subsists till she invalidates it. They conveniently ignore the fact that marriage being a contract in Islam, a contract signed by a minor girl is legally invalid and hence not binding on her.

Strangely, the concept of Option of Puberty continues to find a place in The Dissolution of Muslim Marriages Act, 1939. Section 2 (vii) of this Act states that "a woman married under Muslim law shall be entitled to obtain a decree for dissolution of her marriage" on the ground "that, she having been given in marriage by her father or other guardian before she attained the age of fifteen years, repudiated the marriage before attaining the age of eighteen years, provided that the marriage has not been consummated." It would be interesting to examine the reconcilability of Section 2 (vii) with The Prohibition of Child Marriage Act, 2006.

Restoring legal equality

It is unbelievable that doctrines that deny equality to Muslim women and seek to perpetuate their legal inferiority are being presented as liberal out-of-court divorce provisions. Certainly, our courts should not be further burdened with the additional load of Muslim divorces. But what gets adjudicated in Alternative Dispute Resolution centres too cannot be based on gender-discriminatory provisions of the AIMPLB-endorsed law. Any law that violates the egalitarian principles of the Koran or the humane teachings of the Prophet cannot be termed "Muslim" law.

Therefore, the only way to restore the legal equality of Muslim women and pre-empt the state's legislative interference in the Muslim Personal Law is for the AIMPLB to declare instant triple talaq invalid with immediate effect, and make the Koranic procedure of *talaq* gender-neutral. Social boycotts and no-triple-talaq conditions in *nikahnamas* (prenuptial contracts) will not remedy the legal inferiority of women under the prevailing Muslim law.

Terror and the Metropolitan Police

Preventing future terror attacks in London rests heavily on the trust that exists between the police and the community

R.K. RAGHAVAN

When Cressida Dick (56), the first lady officer to preside over the 188-year-old Metropolitan Police (Met), assumed office on April 10 this year, she should certainly have known that she was taking up one of the toughest police jobs anywhere in the world. A city of over eight million with a hugely diverse population, London, by any standards, is complex to police. Crime is on the rise, if not statistically, at least in public perception. The phenomenon of 'knife crime', mainly by white youth, has assumed dangerous proportions, with the Met having to form special task forces to handle it sternly. The situation is compounded by a tinge of politics, caused especially by differences between an incumbent government belonging to one party and the Mayor to a different party.

Although she is a Home Office appointee, the Commissioner reports to the Mayor. Not long ago a Conservative Mayor, Boris Johnson, gave hell to Ian Blair, appointed by the Labour government in 2005. Mr. Blair had to finally call it a day. This is the political backdrop against which Ms. Dick has to operate. She does not owe her job to either political party, and is generally known to be apolitical and a thorough professional. But she has had a torrid early tenure: first, the strain of coping with the aftermath of the March 22 attack near Parliament, and now last week's attacks at London Bridge and Borough Market, both in central London.

Fortunately, the lightning-like response of the police to the first of the two attacks of last week has won wholesome praise from everyone. Ms. Dick can therefore rest assured that her force will not be lacking in speed if the capital is again subjected to violence. However, the question many Londoners are asking is, how can the police foil a future assault? Do they have enough resources, manpower and legal authority? It is difficult to answer in the affirmative.

The need for numbers

Terrorist violence since 9/11 has repeatedly proved that despite all technological assist-

ance that the police have been given, the latter need more hands. There is nothing as reassuring to the public as seeing an armed policeman in uniform on the street. The Met and the rest of U.K. police have no doubt a litany of complaints against successive Conservative governments, chief of them being an unimaginatively drastic reduction in police strength. A rough estimate is of a loss of about 12,000 jobs in the past seven years. This comes at a time when the police have on their radar about 3,500 terror suspects, and 28,000 "persons of interest". While the Met has about 30,000 men and women, the rest of the country has only about 90,000. There is a clear mismatch here between resources and workload.

The next major issue that confronts the police leadership is: Can the Met and the rest of the U.K. police do more to prevent terrorist attacks? Yes, they can, provided there is a blanket assurance that no policeman will be hauled up for any bona fide action against a terrorist suspect. The task requires constant updating of police dossiers. This calls for sustained fieldwork to collect basic data. Whether the existing police strength – with the assistance of M15, the domestic intelligence outfit – is sufficient to do this is a moot question.

Keeping tabs on radicals

There are known hotspots in London, Birmingham and a host of other places where frustrated Muslim youth are susceptible to recruitment to the militant ideology. Physical and electronic surveillance by the police of suspects is in place. An eye is being kept also on certain mosques for disseminating objectionable propaganda material. The problem, however, is that the arm of the law doesn't extend to indoctrinated, radicalised youth until they commit a crime – this explains the phenomenon of persons left off after questioning going on to indulge in violence.

Ultimately the effectiveness of action in such situations rests heavily on the trust that exists between the police and the community. To be specific, there is a need for ceaseless communication channels that would help identify indoctrinated/radicalised youth; where there is a hiatus, little can be achieved. Despite all the confidence in the overall ability of the police to keep the average citizen safe, what is of concern is the growing feeling that terrorism can never be rooted out completely.

Spelling out their success

Bilingualism may explain why Indians do so well in global spelling contests

SWAMINATHAN SUBRAMANIAM

GETTY IMAGES

When Ananya Vinay took the victory podium at the recently held 2017 U.S. Scripps National Spelling Bee, it was a brain sport grand slam for the Indian-American community. On May 17, Pranay Varada of Texas won the U.S. National Geographic Bee. Indian children also dominate the leader board at the Regeneron Science Talent Search, the U.S.'s most prestigious pre-college science competition.

So what explains this stunning performance (for Indians, at 1% of the U.S. population, this victory parade is a statistical freak, all else being equal). The reasons given for Indian success are the ones usually tagged to Asian immigrants – work ethic, rote learning, high value placed on education in the families of these children (the parents themselves being highly educated), high household incomes, community support, etc. None of these statements are untrue about Indians, and it would indeed appear that a perfect storm of coincidences is powering these children to their enviable success.

The only problem with this rationalisation is the fact that other Asian groups in the U.S., particularly the Chinese, share these attributes in equal (or greater) measure. And yet, Chinese children are not represented among the finalists in these competitions in proportions that come close to the dominance by Indians. It is true that Indian parents are fluent in English – and that may play a role. But there is no reason to believe that their Chinese counterparts fare any worse in English, given that the out-of-home environment, where English is learnt and practised, is the same for both.

A factor?

Is it possible that bilingualism explains this success? Bilingualism promotes cognitive function and capacity. The brain adapts to environmental challenges and the cognitive enhancement seen in bilinguals may be spillovers from brain adaptations required for the complex task of learning and managing two different languages at the same time.

Bilingualism is a necessity for survival in India. Whether you are in the north or the south, you need a second language to communicate with those from outside your home State. Indian children born in the U.S. are exposed by bilingual parents to two languages from birth – the language of their mother tongue, as well as English. Educated Indian parents seamlessly switch between English and the vernacular – this is in contrast to Chinese immigrants. Given these observations, it is reasonable to hypothesise that fluent bilingualism plays a role in the intellectual achievements of Indian children. That the phenomenon may not be unique to the U.S. is supported by similar dominance by Indian children in the RHB-The Straits Times National Spelling Championship in Singapore.

While celebrating these achievements, we must ponder over the implications for language education in India. Is bilingualism important? If so, how do we preserve it against the global monoculture that swamps our lives through social media? Urban Indians experience an increasing erosion of bilingual capability. The loss of a rich and diverse culture is one reason this is tragic. The cognitive disadvantage of being monolingual may be another.

CONCEPTUAL Lollapalooza effect

PSYCHOLOGY

A phenomenon where multiple human biases, acting in a concerted manner, produce a large, extreme outcome. It was coined in 1995 by American billionaire investor Charlie Munger, who is also a partner of investor Warren Buffett. Mr. Munger cited Coca-Cola's dominance of the soft drinks market around the world as an example of the Lollapalooza effect. Coke's easy availability at most stores, strong brand value of happiness, social influence, and other favourable biases towards the drink have created a huge market for it. All of these biases combine to create a compounded effect that creates a competitive advantage for Coke.

FAQ

What ails education in Bihar?

On what lies behind the saga of the Class XII 'toppers'

AMARNATH TEWARY

What was the Ruby Rai controversy? A year after a picture of people climbing the high walls of an examination centre in Vaishali district to pass on chits to examinees shocked the nation, the 2016 intermediate exam topper in humanities, Ruby Rai, hit the headlines with her inability to answer basic questions posed by reporters on her subjects. One of the answers stood out: "Prokidal (Political) Science teaches cooking". As many as 21 people, including the Bihar School Examination Board (BSEB) chairman, his wife, and Ruby Rai were sent to jail, hundreds of BSEB officials transferred from the headquarters, registration of over 200 schools cancelled. Patna Commissioner Anand Kishor was put in charge of the board.

What preventive measures did the Board take? Mr. Kishor took several stringent steps, from introdu-

cing bar code on answer sheets to concealing students' identity to installing CCTV cameras, imposing Section 144 on the days of the exams, deploying heavy police personnel to regular visits of 'flying squads' at the exam centres. In results announced on May 31, 64% students failed to pass the Class XII exam. As many as 654 schools failed to produce even a single successful candidate. Authorities claimed all this was proof that only deserving students passed this year.

Then what went wrong this year? Two days after the results, humanities topper Ganesh Kumar from Samastipur inflicted a Ruby Rai rerun on people. On camera, he failed to hit even the basic notes of music in a subject in which he had got 83% marks; this, amidst claims by some students of having cracked the all-India IIT-JEE tests and yet failing in their BSEB intermediate

exams, and of others that they had received marks in subjects they hadn't even appeared in. The topper was also found to have fudged his age. Ganesh and three others have been arrested and sent to jail.

Is there a systemic issue at fault? Experts say that apart from rampant corruption in the BSEB, the State's education system is in a mess, with teacher absenteeism in higher secondary schools as high as 29%.

The Nitish Kumar government's decision to appoint teachers on contract while abolishing the post of Assistant Teachers is often faulted for marring the quality of education. Against around 27.5 million students, there are only 5,00,000 teachers, of whom 4,00,000 are on contract. Even basic infrastructure is woefully inadequate: the State needs at least 60,000 more classrooms.

U.A.R., Iraq reject U.N. appeal for cease-fire

The United Arab Republic and Iraq to-day [June 7] rejected the United Nations Security Council's call for an immediate cease-fire in West Asia. Arab countries are determined to continue the war. Cairo Radio said and blared anew the call for all-out war. Israel late last night [June 6] told the U.N. Council that it would abide by the U.N. cease-fire call if the "Arabs did like wise." The U.N. Security Council last night [June 6] unanimously adopted a resolution calling for an immediate cease-fire and a cessation of all further military activities in West Asia. The text of the resolution, over the wording of which the 15 members of the Council had wrestled for over 36 hours, was immediately transmitted to Tel Aviv and the various Arab capitals. In Washington President Johnson welcomed the cease-fire call.

Socialist conference— Premier's speech

In the [French] Senate yesterday, M. Regimanset introduced an interpellation inviting M. Ribot to define the general policy of France. He said that the Senate was unanimously indignant when seven Frenchmen proposed to go to Stockholm to confer with Germans, and it wished to share Government's responsibilities, being unable to admit that Frenchmen could show the least sign of halting when the country was still invaded.

M. Ribot replying said, that the German Socialists from the first were conscious accomplices in the crimes against humanity and even now approved atrocities by culpable silence. It was morally impossible for Frenchmen in the middle of the war and when France was still invaded to confer with such enemies.

DATA POINT

Hardly wired in

On an average, around 74% of schools in India don't have a computer on their premises. Also, there are wide variations among States, with 92.4% of schools in Bihar not having a computer. In Kerala, only 6% of schools do not have one
